I INTERNATIONAL COURSE IN FETAL ECHOCARDIOGRAPHY

Organized by *i*Materna Foundation in cooperation with the
UGC de Ginecología y Obstetricia from Hospital San Cecilio, PTS. Granada

Committed to the health of women and
future generations

PROGRAM

FETAL ECHOCARDIOGRAPHY COURSE

Welcome to the first fetal echocardiography course organized by the Foundation for research and development of maternal, fetal and neonatal medicine, *iMaterna*.

This course is framed by extensive theoretical and visual training that covers all aspects of the fetal echocardiographic exploration during gestation. Our objectives are: to update the assistants' knowledge, to improve their diagnostic capacity and learn the prognosis and the treatment to the different anomalies of the fetal heart.

International and national experts in Fetal Echocardiography will work with you to achieve these objectives during the course.

It is advised to consult the free course on-line of the Fetal Medicine Foundation

<https://fetalmedicine.org/education/fetal-echocardiography-1>

After completing this course, the attendees will have the opportunity to obtain the Certification of Competence granted by the FMF in echocardiography by completing the on-line course and carrying out the associated case-questions.

During the face-to-face course, the fundamental contents of this theoretical training will be reinforced both during talks and through an interactive workshop on clinical cases on the second day.

This activity is in the process of accreditation.

There will be simultaneous translation English-Spanish-English.

We hope that this course is of your interest and you support us in this exciting project.

Belén Santacruz

President of *iMaterna*
